This test was conducted according to NF P 92-507:2004 Fire safety-building-interior fitting materials -Classification according to their reaction to fire. And the test methods as following:

1. NF P 92-503:1995 Fire safety - Building - Testing how materials react to fire - Electric burner test applicable to flexible materials.

Conditioning:

Prior to testing, the sample was conditioned at temperature of (23±2)°C and relative humidity of (50±5)% for 144 hours.

Test Results:

1. NF P 92-503:1995

Flame spread test (< 2mm/s)			M4	M4	M4

a) If the materials presented a particular behaviour, the classification also needs to refer to Table 3. For the classification M0 refer to clause 3.3

Statements:

The test results relate to the behaviour of the test specimens of a product under the particular conditions of the test; they are not intended to be the sole criterion for assessing the potential fire hazard of the product in use.

The test results relate only to the specimens of the product in the form in which were tested. Small differences in the composition or thickness of the product may significantly affect the performance during the test and may therefore invalidate the test results. Care should be taken to ensure that any product, which is supplied or used, is fully represented by the specimens, which were tested.
